***Allowable Subject Matter***

Claims 3-4 and 7-8 allowed over the prior art.

The following is a statement of reasons for the indication of allowable subject matter: regarding to claims 3-4, the reasons for the allowance of the claim are due to the amended claim 3 by the examiner's amendment blow with specific detail of an eccentric bearing mounted in the rotary guide plate and a fixed guide pin is inserted in the eccentric bearing. The prior art does not teach or suggest a probe card with the structure that an eccentric bearing is mounted in the rotary guide plate and a fixed guide pin is inserted in the eccentric bearing. The persuasive arguments is found on the "Remarks" section on pages 2-3. Claims 7-8 are allowable because they incorporate the allowable features in claims 2 and 5 respectively indicated allowable on previous office action dated on 8-23-04.

**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicant's attorney Mr. James Walters on 2-24-05.

The following amendment is being made to place the application in condition for allowance.

1. Claims 1-2 and 9-10 have been cancelled.
2. Claim 3 has been amended as follows:

Claim 3 (currently amended) A probe card of a measuring apparatus for a semiconductor device comprising:

an electrically-conductive linear probe needle whose bottom end contacts with the device under test, a circuit board with which the upper end of the probe needle is connected electrically, an upper guide plate held horizontally and firmly near the middle point between the upper end and the center of said probe needle and having a guide hole to guide said probe needle, a lower guide plate held horizontally and firmly near the middle point between the center and the bottom end of said probe needle and having a guide hole to guide said probe needle, a rotary guide plate held horizontally and movably near the center of said probe needle and having a guide hole to guide said probe needle, an initial-position holding means to hold said rotary guide plate temporary and firmly at the initial position where said probe needle is straight, a movable holding means to hold movably said rotary guide plate at the position where the center of said probe needle bent, a driving means to rotate said rotary guide plate in the horizontal plane, wherein an eccentric bearing is mounted in said rotary guide plate and said movable holding means is the fixed guide pin inserted in said eccentric bearing.

3. In claim 4, line 1, "claim 1" has been changed to "claim 3".
